### JIRA:-

According to Atlassian, Jira is used for issue tracking and project management by over 180,000 customers in 190 countries.<sup>[6]</sup> Some of the organizations that have used Jira at some point in time for bug-tracking and project management include [Fedora Commons](#),<sup>[7]</sup> [Hibernate](#),<sup>[8]</sup> and the [Apache Software Foundation](#), which uses both Jira and Bugzilla.<sup>[9]</sup> Jira includes tools allowing migration from competitor Bugzilla.<sup>[10]</sup>

Jira is offered in four packages:<sup>[11]</sup>

- **Jira Work Management** is intended as generic project management.
- **Jira Software** includes the base software, including agile project management features (previously a separate product: Jira Agile).
- **Jira Service Management** is intended for use by IT operations or business service desks.
- **Jira Align** is intended for strategic product and portfolio management.

Jira is written in [Java](#)

Usage of jira to manage our processes and create issues and finish it collaboratively.
